

### Handout 3 for Agenda Item J

a (2) “Zero net carbon design requirement” means architectural designs including resilient designs of new construction and/or existing facilities that produces on-site, or equitably procures from offsite, enough carbon-free renewable energy to meet building operations energy consumption over the building project’s life-cycle. This also includes architectural design responsive to embodied carbon reduction and resilient performance of a facility that results in reduced embodied carbon or minimized carbon that would have otherwise resulted from reconstruction.
